DEFINITIONS

Reporting responsibility on COVID-19 involves understanding some of the important and most commonly used terms. Below is a list of definitions that you will need to familiarise yourself with when reporting on COVID-19.

**Reporting responsibility on COVID-19 involves understanding some of the important and most commonly used terms. Below is a list of definitions that you will need to familiarise yourself with when reporting on COVID-19.**

People are put in quarantine when they are not currently sick, but have been or may have been exposed to a contagious disease, such as COVID-19. This can help stop the spread of the disease. People have limited contact with others for the duration of the COVID-19 incubation period (time from infection to showing symptoms), which ranges from 2 to 14 days.

**Isolation** happens when a person is infected with an infectious disease and is separated from people who are healthy. This also helps to stop the spread of the disease.

**Self-quarantine** is another preventive measure for people who have been to high-risk COVID-19 countries such as China, Spain, US, or Italy, or who have been in contact with someone who has traveled to these countries. Staying at home, instead of going to school or work and only leaving when it's absolutely necessary, for instance, to get groceries, is also considered a self-quarantine.

**Self-isolation** is similar to self-quarantine. A person goes into self-isolation when they are showing flu-like symptoms and can confirm to have been in contact with someone infected with COVID-19. During this time, people must limit contact with others and contact a medical professional for assessment.

**COVID-19 virus** can survive for up to 72 hours on plastic and stainless steel, less than 4 hours on cardboard. As, always clean your hands with an alcohol-based hand rub or wash them with soap and water. Avoid touching your eyes, mouth, or nose.

**Common household disinfectants** that will survive on surfaces such as wood, steel, less than 4 hours on copper and less than 24 hours on plastic and stainless steel, less than 4 hours on cardboard. As, always clean your hands with an alcohol-based hand rub or wash them with soap and water. Avoid touching your eyes, mouth, or nose.

**QUESTION:** "What will happen to the school learners, especially the matriculants? If the lockdown were to be extended again?"

**RESPONSE:** The Department of Basic Education made an announcement on the postponement of the Matriculation and National Senior Certificate Examination. The May-June 2020 examination was scheduled to start on Monday, 4 May 2020 and conclude on Friday, 26 June 2020. "At the HECOM meeting of 10 April 2020, it was agreed that the May-June examination should be merged with the November 2020 examination," Director-General of the Department of Basic Education, Mr. Mathanzima Mweli said. The details regarding the merged June and November examination will be communicated to you in due course. Candidates will be informed regarding registration, examination centers and time-tables. The Department urges all candidates to continue their preparations.

**QUESTION:** "What is mental health and how is it associated with the pandemic? Because I’ve heard a lot of people online and on TV saying the pandemic is affecting our mental health and I fail to understand how."

**RESPONSE:** The COVID-19 pandemic has brought about many unexpected changes for all of our lives. We are receiving information daily, teaching us about COVID-19 symptoms, new definitions of safety measures to help us manage our health. In as much as keeping up to date on COVID-19 is empowering, it can also become overwhelming for our mental health.

**Mental Health:** is an essential part of all of us which includes our thoughts and feelings, how we are getting on with other people and how we are managing day-to-day life. Having good mental health is about feeling positive about ourselves or sometimes just feeling good enough. Just as everyone has physical health, everyone also has mental health. The state of our mental health doesn’t stay constant but changes, often in response to things that are happening in our life.

**QUESTION:** "How long does coronavirus survive on surfaces such as wood, steel, plastic, etc.?"

**RESPONSE:** The most important thing to know about coronavirus on surfaces is that it can easily be cleaned with common household disinfectants that will kill the virus. Studies have shown that the COVID-19 virus can survive for up to 72 hours on plastic and stainless steel, less than 4 hours on copper and less than 24 hours on cardboard. As, always clean your hands with an alcohol-based hand rub or wash them with soap and water. Avoid touching your eyes, mouth, or nose.

COVID-19: WEEK 27 APRIL - 1 MAY

**WANDA NDONGENI (UCR-FM)**

**QUESTION:** "I would like to know how we as young people can assist our parents and our community during COVID-19?"

**RESPONSE:** Older adults are at higher risk for severe illness from COVID-19, according to the Centers for Disease Control and Prevention (CDC). Yet many older adults aren’t taking social distancing and hygiene directives seriously. If your parent or grandparent is resisting the CDC’s advice on coronavirus precautions, here are some tips that can help you:

- Make sure you’re the right person for this conversation: Think about people your parents are comfortable with and trust, such as a family friend, sibling, or pastor.
- Ask a lot of questions: Ask your parents or older persons questions to really understand what’s driving their behavior — and listen to their answers. Once you hear where your parent is coming from, mirror it back to them verbally to show them that you understand where they’re coming from. Often times we can help people change their behavior if we figure out what’s driving them. Then you can help the parent identify and find ways to change their own behavior.

**Share information from trustworthy sources:** Find out where your parents are getting their information from. In many families, the older generation watches sources that have downplayed the pandemic and stated that measures like mandated closures and social distancing are overblown or unnecessary. Make sure parents are getting correct, science-based information from direct, trustworthy sources like the CDC, UNICEF and WHO.

**QUESTION:** "COVID-19 has a psychological impact on everyone with the uncertainty of the future, be it academic or employment. How can we as young people manage day-to-day life? Having a tough day or feeling anxiety at times is completely normal. Having a tough day or feeling anxiety at times is completely normal. It also helps to make sure that you use reliable sources of information like UNICEF and the World Health Organisation sites, in order to avoid fake news and rumors that cause fear and panic."
